

## NewsLetter - 3rd week

In early this week, we went to EFMS to pitch our ideas to the client. After a meaningful discussion, client preferred the idea that developing an App that lets kids design their spintop. The specialty of this idea was supported by the final spintop competition. As the superintendent Bart said, top competition will to some extent inspire students' creativity and substantially guide them through design thinking process. After returned from EFMS, we had a brief team meeting in which we determine to go with the spintop idea.

For the next few days of this week, we spent the majority of our project-devoted time solidifying and finalizing the idea. Furthermore, we borrowed a 3d printer from ETC by using which, we were able to do prototypes of top. Steve, the Director of Information Technology, had shown us how to use the 3d printer and brought us materials that will be frequently used during the process.

On Friday, our first top was born! It was a beautiful spintop.
