NewsLetter - 4th week

Our team's energy and focus was, this week, directed toward the survey among the students. We did some preparations for visiting EFMS, including the design of questionnaire, contact with assistant superintendent, collection of advisor's suggestions. The visit was on Wednesday the 18th, the assistant of principal Nancy arranged the survey. There were 48 students whose age ranged from 12-14 participated the activity. The survey session went very well and some 6th graders had shown their passion in our 3D-printed tops.

On the technical aspect, we sorted out the main technical challenges and discussed around them. The programmer Yan analyzed the problems and have started to prototype the App in Unity3D.

We will be having ETC quater walkaround next week. All of us had been researching on creating the spintop from aesthetic and technological perspective. Keyin the artist also made beautiful branding such as project poster, half-sheet and website for the team. On next week, we will concentrate on App prototyping after the quarter presentation. We are looking forward to getting the valuable feedbacks from ETC faculty members and our client.
