

NewsLetter 5th week

Our team's energy and focus was this week, directed toward our Quarters presentation, which took place on Wednesday in our project room. Four groups of ETC faculty came to listen to our presentation and gave us a lot of useful feedback.

Monday and Tuesday, we filled up the content of Powerpoint. Fan was responsible for the layout and structure of all presentation slides. MZ and Yan prepared the slides about playtest. Meanwhile, they also created a sample top that significantly illustrated the feasibility of our project. Thanks to our 2D artist Keyin, she inserted artistic effect and background to the slides and made it look professional and attractive. Before Quarters, we rehearsed many times and presented to our advisor three times.

Wednesday, the presentation went very smoothly. During Q&A session, faculties were most interested in the 3d printing technology. With a "live" 3d printer on the table, we showed them the clear procedure of 3d printing. Except this inquiry, they also asked questions about our UI design, competition design and gave us few suggestions about art asset design. Our Quarter experience was overall exceedingly positive and we look forward to showing our prototype and our concrete efforts of our conceptualization and playtest, for halves.
