WEEK OVERVIEW

This was the last week for the project, and it is essentially done. The team has finished our final presentation and is finishing documentation and the project archive for hand-off.

PROGRESS

The team prepared and rehearsed for our final presentation on Monday and Tuesday. The presentation itself was on Wednesday, and while there were some small issues, the faculty has given us overall positive feedback on how we did.
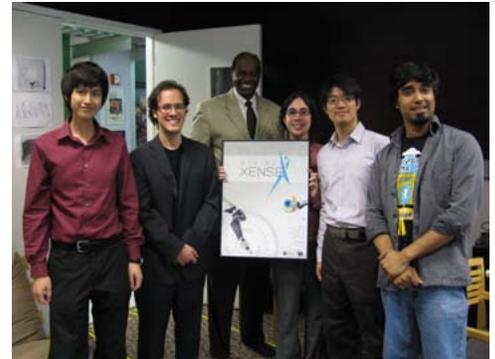

Tony Story, a Research and Development Analyst from TATRC, visited the ETC for the first time on Wednesday to see our final presentation. Tony had the chance to experience our final exhibits, and he was very impressed by the work we had done.

Joe Samosky also came on Wednesday, though a bit too late to see the final presentation. He congratulated the team on our work as well, and the first-years on the team who aren't graduating look forward to seeing him around Pittsburgh.

The team spent Thursday and Friday finishing documentation: The project archives, media, and documents have been organized and edited where necessary. Zeina has written technical documentation for using as well as editing the Audio and Neuro exhibits. David is finishing that for the Visual exhibition.

PLANS

The documentation and archive will be checked one last time on Monday, May 14. After that, the team will basically be going their separate ways. As to the project, Brett will be getting the exhibits fabricated at CMU over the summer. Moreover, Elwin and Albert do plan on presenting at Balticon (May 28) with Brett as well as to participate in the Interactive Exhibition at the DATA Awards (June 7), and will make some preparations in terms of media and hardware.
